

LONG BEFORE THE BEGINNING of recorded history, primitive people learned to shape useful articles out of clay and bake them in the sun until they were hard.

The first earthenware was roughly shaped by hands alone and lightly baked against an open fire. Then the use of the potter's wheel, the first mechanical aid employed, and a primitive form of kiln, to shield the articles from too close contact with fire, opened the way to improvement of form and usefulness.

Before methods of glazing were discovered, pots and other articles were decorated by scratching with a pointed stick or by shaping with the fingers as the wet clay was handled.

The name "Chinaware" was used in the 17th century to distinguish the wares imported from China and the East, from pottery made in Europe at that time.

Through all the centuries of chinaware making, many improvements have taken place. Not only in durability, attractiveness, but also in the manufacturing.

"Tepco China" with its modern up-to-date process, was established in 1918, and today, is one of the largest manufacturers of 100 percent Vitrified Hotel and Restaurant Chinaware west of the Mississippi River.

With a large background of experiments, secret formulas, and practical experience, you can be assured of receiving only the highest quality of china from the Tepco factory at the lowest possible prices.

"Tepco China" means dividends to you every year you keep it in service, for it will not craze and will stand hard usage. On the other side of this circular is shown Plain Sunglow and Sunglow No. 61 which is carried in stock for immediate shipment upon receipt of your order. Also Plain White and Green Band are carried in stock, too. These two patterns shown are plain, but yet very attractive, and will fit into any type of hotel, cafeteria, coffee shop, restaurant, or anyplace chinaware is needed.

Besides the Plain Sunglow or Sunglow No. 61 patterns, "Tepco China" can be had in a great many other decorations or line treatments. Any combination of colors can be had to suit any color scheme in print, decal, or colored band and line treatments, with or without special crest or monogram. All decorations are put on under the glaze and will not wear off in any washing compound, soap suds, acids, or salts originating in foods.

If you are interested in chinaware at low, economical prices—you are sure to find it at "Tepco China." You will like the prompt, efficient, and courteous service and the friendly helpful spirit of the people that make up the Tepco organization.

THE DAYS of the Pony Express are passed and perhaps forgotten, but "Tepco China" tried to bring back a memory of the old West, in the pattern called "Western Traveler."

In a way, like the Pony Express, "Tepco" has contributed to the development of the West. The present company was established in 1918 and today, is one of the largest manufacturers of 100 percent Vitrified Hotel and Restaurant Chinaware west of the Mississippi River.

Good china makers are not to be found in the labor market — they must be made. There are men that have been with the Tepco organization for thirty years. These men teach to the young employees all their knowledge and experience that they themselves have accumulated.

These employees take pride in their work, and are enthusiastic to produce a product that is foremost in their field. Their efforts give you added quality, greater durability, and superior appearance.

Besides the "Western Traveler" pattern "Tepco China" can be had in a great many other decorations or line treatments. Any combination of colors can be had to suit any color scheme in print, decal or colored band and line treatments, with or without special crest or monogram. Also Plain White or Plain Sunglow Ware.

All decorations and line treatments are put on under the glaze and will not wear off in any washing compound, soap suds, or sulphuric acid. Each dish undergoes a two fire process, which leaves a high, hard glaze.

We are exceedingly proud of the Tepco factory and wish to extend to you an invitation to visit us and let us show you our modern up-to-date process, which we believe helps to make "Tepco" the finest chinaware on the market today.

Los Angeles 12, California

START THE DAY RIGHT — end the day bright, by having "Tepco China's" most economical line treatments for your chinaware demands. These decorations, Marigold, Pin Line, Green Band and Line, and of course, the ever popular Plain White, are neat, attractive, yet will harmonize with any color scheme.

"Tepco China" can be had in a great many patterns or line treatments. Any combination of colors can be had to suit any color scheme in print, decal or colored band and line treatments, with or without special crest or monogram.

All decorations are put on under the glaze and will not wear off in any washing compound, soap suds, acids, or salts originating in foods.

The reason for glazing chinaware is to give it a more pleasing appearance. Each piece of ware is glazed by hand to assure you of even and perfectly covered ware. This bisque ware is dipped into Tepco's secret glazing solution, which is the result of years of experiments and study and then set on conveyer shelves and run through a high temperature drier. When dry the glaze covers the surface as a dry powder which melts in the gloss firing, giving a smooth, shiny, hard finish which serves to protect the ware.

"Tepco China's" employees are a group of highly skilled and trained workmen, many of which have been with the Tepco organization for thirty years. It is their skill and experience that assures you of the highest quality chinaware obtainable.

Neat as only Tepco can create — quality as only Tepco can perfect — so durable — so surprisingly inexpensive! Ask your Tepco dealer to show you these economical line treatments, Marigold, Pin Line, Green Band and Line, also Plain White.

"Tepco"

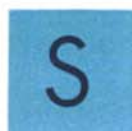

Hawaiian

Technical Porcelain and China Ware Company

Main Office
6416 Manila Street
El Cerrito, California

Branch Office
223 So. Los Angeles Street
Los Angeles 32, California

SINCE THE DISCOVERY of the Hawaiian Islands by Europeans, hundreds of plants have been introduced. One of the most popular and ornamental of the flowering shrubs is the Hibiscus.

One of our employees, who spent a considerable amount of time in the Hawaiian Islands, returned to the Tepco factory and told us about this beautiful flower that grows everywhere on the Islands.

After seeing the hibiscus "Tepco China" decided to use this flower in an over-all pattern, thus calling it "Hawaiian."

Technical Porcelain & China Ware Company was established in 1918, and today, is one of the largest manufacturers of 100 percent Vitrified Hotel and Restaurant Chinaware west of the Mississippi River.

The raw materials used in our product are the best obtainable in this country, and several foreign countries. All ingredients are carefully tested and examined before use. These materials are then scientifically blended to form our body. Now it is delivered to the skilled craftsmen, who in turn produce "Tepco China."

Our employees are a group of highly skilled and trained workmen, some that have been with the Tepco organization for thirty years. They are always interested in improving their product so that they can bring you greater durability, added quality, and superior appearance.

"Tepco China," in addition to the "Hawaiian Pattern," is also available in a great many other decorations or line treatments. Any combination of colors can be had to suit any color scheme in print, decal, or colored band and line treatments, with or without special crest or monogram. Also Plain White or Sunglow Ware.

All decorations and line treatments are put on under a secret glaze formula which is the result of years of study and experiments. This glaze will not wear off in any washing compound, soap suds, or acidic acid. Each dish undergoes a two fire process, which leaves a high, hard glaze.

Improvements have been made to increase production and quality each year, and now Technical Porcelain and China Ware Company is one of the outstanding potteries on the West Coast and is stream-lined to the fullest extent. Will you come and visit us, so that we may show you our modern up-to-date process, which we believe helps to make "Tepco" the finest chinaware on the market today?

N

OW — WITH "TEPCO CHINA'S" NEW "PALM PATTERN" — you get a design of light and shadow — you get the attractive modern chinaware look — the illusion of a deep-piled sculptured dish or cup! Here it is in the "Palm Pattern," a graceful new design — gleaming and dull surfaces combined to give you an entirely new look of luxury to your coffee shop, restaurant, or wherever chinaware is needed. And to think you can have rich looking chinaware, that will add color and beauty, at the most economical and lowest prices!

"Tepco China" can be purchased only through jobbers and can be had in hundreds of line treatments or decorations. Any combination of colors to suit any color scheme in print, decal, or colored band and line treatments with or without special crests or monograms. All decorations are put on under the glaze and will not wear off in any washing compound, soap suds, acids, or salts originating in foods. Each dish undergoes a two-fire process to assure a high, hard glaze.

"Tepco China" passed the United States Bureau of Standards on the impact and absorption tests, also on the weights specified per dozen.

The present company has a large background of experiments, secret formulas, and practical experience having been established in 1918, and today, is one of the largest manufacturers of 100% Vitrified Hotel and Restaurant Chinaware west of the Mississippi River. You can be assured of receiving only the highest quality of chinaware when you select "Tepco China." Where else could you get greater durability, added quality, and superior appearance at such low prices?

If you need chinaware and want a truly fine pattern or plain ware, try "Tepco China"—let your customers be your judge.

CUSTOMER LOYALTY is one of your most valuable assets. And wisdom will prompt you to hold and build this loyalty. "Tepco China's" new colorful "Madera Pattern" is designed to help you. Displayed in a formal or casual table setting, you'll find it's a sure hit.

This charming design, illustrating the poppy which is the state flower of California, in an overall pattern, is available in many shades of maroon, brown, green — on a body of White or Sunglow (Tan) and with cups in any of several different shapes.

The quality of "Tepco China" is recognized as being of the finest. Smooth texture, brilliant glazing, smart styling of shapes, carefully created and executed decorations have combined to establish the name of Tepco as synonymous with quality hotel and restaurant chinaware.

All the plates, platters, cups, bakers, saucers, fruits, bowls, and butters are shaped by jiggering. This is done by using a simple machine consisting of a rotating spindle carrying a head on which is placed a plaster mold, having the shape of either the inside or outside of the ware.

On this mold is placed a piece of clay, large enough to cover all of it. Then a template of the desired shape, attached to a lever, is lowered into contact with the clay on the mold. The whole time this mold is rotating. When the clay has assumed the correct shape of the mold the template is raised and the mold is removed.

After this jiggering method, the clay is allowed to remain on the mold until it is dry, which usually takes about four hours. Then the plate or whatever it may be, is removed from the mold and "Finished." By this we mean all the edges are trimmed away and then is sponged to make a smooth surface.

Now the ware is ready for its first firing at extreme high temperature for durability, to stand heat and shock resistance, then it is decorated or left plain, the glaze is applied, then fired again for its appearance.

"Tepco China" can be had in hundreds of decorations or combinations of colors to suit any color scheme in print, decal, or colored band and line treatments, with or without special crest or monogram. All decorations are applied under the glaze and will not wear off in any washing compound, soap suds, citric acid, or salts originating in foods.

It is important to know that despite the fine quality of "Tepco China," it is offered at prices amazingly low—resulting from volume production by the most modern methods of chinaware manufacture.

GOOD FOOD AND FRIENDLY SERVICE — they are two parts of hospitality. But add "Tepco China's" latest pattern "Oregonian Rose" — to make your food look attractive — to bring color and glamor to each table — to give your patrons dining at its best. Then your hospitality is complete!

Technical Porcelain and China Ware Company was established in 1918, and today, is one of the largest manufacturers of 100 percent Vitrified Hotel and Restaurant Chinaware, west of the Mississippi River.

All the plates, platters, cups, bakers, saucers, fruits, bowls, and butters are jiggered by hand in the Tepco factory. But the jugs, creamers, and tea pots are formed by a process called "Casting."

In this method the clay or slip that was pumped into the filter presses is in the form of round cakes with all water removed. To mix the slip for casting these filter cakes are first plunged in water, to which sodium silicates have been added to double its specific weight. The slip is now a fluid that can be poured.

This slip is poured into plaster molds, the shape of the object desired, whereupon the inner surface of the mold becomes covered with a layer of slip. The surplus slip is tapped off, and the mold left to dry. When drying, the slip loses more water and shrinks away from the mold so that it can easily be removed.

This slip is allowed to remain in the molds until the thickness desired is obtained. For $\frac{3}{16}$ of an inch, it must remain twenty minutes. The longer the slip remains in the mold the thicker the object becomes. This casted ware is now ready to be decorated or left plain, undergo a two-fire process and be shipped out to you.

"Tepco China" can be had in hundreds of decorations or combinations of colors to suit any color scheme in print, decal, or colored band and line treatments, with or without special crest or monogram. All decorations are applied under the glaze and will not wear off in any washing compound, soap suds, acids, or salts originating in foods.

Let "Tepco China" add hospitality — and profits — for you. See the "Oregonian Rose," you will never believe that you can have this attractive chinaware at such low prices.

AN YOU THINK of a more appropriate adjective than "magnificent" to apply to the magnolia trees and shrubs? Here we have a genus of plants — some native others introduced from the Orient — that are not only spectacular, but also varied in size, form, habit, and effect. When in bloom the magnolia is suitable for all kinds of settings, from small homes to large formal landscapes in parks and other public grounds.

With its large, waxy, cup-shaped petals and long-leathery leaves the magnolia flower has long been considered a symbol of the Southland. When "Tepco China" saw this magnificent State flower of Louisiana and Mississippi, they couldn't resist copying its loveliness on vitrified chinaware and making the "Dixie Pattern."

"Tepco China" was established in 1918, and today, is one of the largest manufacturers of 100 percent Vitrified Hotel and Restaurant Chinaware west of the Mississippi River.

Good china makers are not to be found in the labor market — they must be made. There are men that have been with the Tepco organization for thirty years. These men teach to the young employees all their knowledge and experience that they themselves have accumulated.

These employees take pride in their work, and are enthusiastic to produce a product that is foremost in their field. Their efforts give you added quality, greater durability, and superior appearance.

Besides the "Dixie Pattern," "Tepco China" can be had in a great many other decorations or line treatments. Any combination of colors can be had to suit any color scheme in print, decal or colored band and line treatments, with or without special crest or monogram. Also Plain White or Plain Sunglow Ware.

All decorations and line treatments are put on under the glaze and will not wear off in any washing compound, soap suds, or acidic acid. Each dish undergoes a two fire process, which leaves a high, hard glaze.

We are exceedingly proud of the Tepco factory and wish to extend to you an invitation to visit us and let us show you our modern up-to-date process, which we believe helps to make "Tepco" the finest chinaware on the market today.

Technical Porcelain and China Ware Co.

"Tepco"

Colonial

Technical Porcelain and China Ware Company

W

HEN THE FIRST SETTLERS of the Thirteen Colonies landed here in America, they brought their own chinaware of Oriental and English origin by the ship-loads. The chief characteristic of all colonial design is the attempt to create the atmosphere of the mother country in a new environment.

Even with the limited amount of working materials and the hardships encountered by the Colonists, the first earliest attempts to make china appears to have taken place in Philadelphia in 1769. But in 1773 because of the difficulties and chinaware being such an expensive business, the Southward China Company in Philadelphia, was forced to close down. It wasn't until 1832 that the colonists became more ambitious in their chinaware manufacturing.

"Tepco China" tried to bring back a memory of the Colonial Days in their latest pattern called "Colonial." A friendly, cheerful design that will harmonize with your styling and color scheme. The "Colonial Pattern" is helping many of the restaurants, coffee shops, and hotels to build prestige and a profitable, steady trade.

"Colonial" is available in many shades of green, maroon, brown — on a body of White or Sunglow (Tan), and with cups in any of several different shapes.

Besides the "Colonial Pattern," "Tepco China" can be had in a great many other decorations or line treatments. Any combination of colors can be had to suit any color scheme in print, decal, or colored band and line treatments, with or without special crest or monogram.

All decorations are put on under the glaze and will not wear off in any washing compound, soap suds, acids, or salts originating in foods.

All "Tepco China" is 100% Vitrified. A coat of hard, durable glaze protects Tepco's beautiful patterns. "Tepco China" means dividends to you every year you keep it in service, for it will not craze, and will stand hard usage.

You can be assured of future replacements for the Tepco pattern of your choice. Ask your Tepco dealer to help you select the pattern, shape, and colors that will harmonize with your styling and color scheme or write us.

"Tepco"

BAMBOO PATTERN

Technical Porcelain and China Ware Company

Main Office
6416 Manila Street

Branch Office
223 So. Los Angeles Street

MAGINE A LARGE BAMBOO STEM with its large, oval leaves growing right on your own table. Bright colors burst forth on real white chinaware. That is what "Tepco China" has produced for you when they designed the "Bamboo Pattern."

Tepco artists first create a design for decoration, such as the "Bamboo Pattern." Engravings for these decorations or crests are then made and transferred to the chinaware by either underglaze print or underglaze decal process in our Print Department. As for any line treatments, each piece of ware is lined by hand with a brush.

All decorations and line treatments are put on under the glaze and will not wear off in any washing compound, soap suds, acids, or salts originating in foods.

Every step in the production of patterns or line treatments get the individual care of our experienced workmen and only the highest quality of materials are used.

"Tepco China" can be had in a great many patterns or line treatments. Any combination of colors can be had to suit any color scheme in print, decal, or colored band and line treatments, with or without special crest or monogram. Also plain white or plain sunglow ware.

The real excellence of "Tepco China" lies in the fact that it was established in 1918, and today, is one of the largest manufacturers of 100 percent Vitrified Hotel and Restaurant Chinaware west of the Mississippi River.

The employees that compose the Tepco organization are highly skilled and trained workmen and are always interested in improving their product. Some of these men have been with the Tepco organization for thirty years or more.

When you select "Tepco China," you can be assured of receiving greater durability, added quality, and superior appearance at low economical prices.

Branch Office
223 So. Los Angeles Street

A DELIGHTFUL PATTERN illustrating branches of needles and pine cones, growing right on your own table. This is a friendly, cheerful, modern design, consisting of green and brown arranged in an overall pattern, that will harmonize with your styling and color scheme. What would be a more appropriate name than "NEEDLES and PINE?"

"Tepco China" can be purchased only through jobbers and can be had in hundreds of line treatments or decorations. Any combination of colors to suit any color scheme in print, decal, or colored band and line treatments with or without special crests or monograms. All decorations are put on under the glaze and will not wear off in any washing compound, soap suds, acids, or salts originating in foods. Each dish undergoes a two-fire process to assure a high, hard glaze.

The present company has a large background of experiments, secret formulas, and practical experience having been established in 1918, and today, is one of the largest manufacturers of 100% Vitrified Hotel and Restaurant China-ware west of the Mississippi River.

The products manufactured by our company are used on steamship lines, railroads, institutions, hotels, restaurants, and Armed Forces the world over.

You can be assured of receiving only the highest quality of chinaware when you select "Tepco China." Where else could you find greater durability, added quality, and superior appearance at such low prices?

Branch Office
Los Angeles 12, California

MODOC IS A NORTH AMERICAN INDIAN TRIBE which had lived in the southwestern part of Oregon. This tribe was constantly in a state of hostility toward the whites and after being segregated on the Klamath Reservation attempted to return to their original dislikes, causing the Modoc War of 1872-1873. After this war the tribe was divided, part being placed on the Quapaw Reservation in Indian Territory and part on the Klamath Reservation.

The first order "Tepco China" sold of this pattern was shipped to Modoc County, California, thus causing them to name this design "Modoc." This "Modoc Pattern" executed with smart simplicity, it is equally at home in most modern interiors.

The most important department in the Tepco factory is the Slip House. This is where feldspar, pure white quartz, and special clays are tested for quality and uniformity, and then scientifically blended and ground to extreme fineness. A magnetic treatment is used to remove the last traces of iron, then this mixture is aged to increase its workability.

After this mixture (liquid clay or slip) is aged, it is then pumped under high pressure into Filter Presses, between heavy canvas sacks. The sacks holding all particles except the water, which drops down below the presses, thus leaving a leaf of clay in each canvas-lined compartment.

When the clay is removed from the Filter Presses it is brought to the Dairing Pug Mill. This machine as the name implies is used for taking air out of clay. Clay is fed at one end, is forced through a chamber having 27 inches of vacuum, then it is forced out the exhaust end in the form of a roll. Which eliminates all lamination. These rolls are now ready for the Clay Shop where highly skilled and trained workmen produce "Tepco China."

"Tepco China" can be had in hundreds of decorations or combinations of colors to suit any color scheme in print, decal, or colored band and line treatments, with or without special crest or monogram. All decorations are applied under the glaze and will not wear off in any washing compound, soap suds, acids, or salts originating in foods. Each piece of chinaware undergoes a two-fire process, which leaves a high, hard glaze.

If you are interested in attractively designed chinaware, that will not craze, but will stand hard usage, and at the lowest possible prices—you are sure to find it at "Tepco China."

Los Angeles 12, California

NO DOUBT EVERYBODY HAS SEEN A PINE TREE. But, do you remember the pine scent floating through the air and causing you to look upward to see a cluster of pine cones among needle-like leaves? It is a sight never to be forgotten! That is why "Tepco China" has designed the "Pine Cone Pattern."

This pattern can be made with brown pine cone clusters on a Sunglow body, maroon on a White body, or any color combination you may prefer. From one to three clusters of pine cones can be arranged on chinaware depending upon your decision.

Each piece of chinaware undergoes a great many steps in the Tepco factory before it is a finished product. One of the most important steps is the high temperature firing.

In the earlier days of making chinaware, it was fired by placing it in beehive kilns on batch slots with fires underneath them. After the proper temperature had been reached, the kiln was allowed to cool and the ware was then removed. This process took from eight to ten days to complete.

Today, with Tepco's modern up-to-date kilns, each piece of ware is fired twice to assure you of a high, hard glaze. First, it is placed in a Bisque Circular Kiln, which is fired at 2400 degrees Fahrenheit for fifty-six hours. This is a continuous process and at no time does the kiln stop running. This Bisque Kiln turns out 36,000 pieces of ware every fifty-six hours.

After the first firing of chinaware, it is then removed from the Bisque Kiln and ready to be decorated, or if desired left plain. You will notice that the decoration is applied before the glaze. By doing this, the line treatments or decorations will not wear off in any washing compound, soap suds, acids, or salts originating in foods.

The ware is now ready to be dipped in a secret glaze formula, which is the result of years of study and experiments.

The second firing is done in our Gloss Tunnel Kiln, which has a temperature of 2100 degrees Fahrenheit. This kiln also produces 36,000 pieces every fifty-six hours. After the chinaware is removed from the Gloss Kiln, it is brought to the warehouse to be classified, packed in cartons or barrels and shipped out to you.

The employees that compose the Tepco organization are highly skilled and trained workmen. Each piece of chinaware produced gets individual care because these men take pride in their work and are always interested in improving their product. In this way, you can be assured of receiving greater durability, added quality, and superior appearance.

The Technical Porcelain and China Ware Company was established in 1918, and today, is one of the largest manufacturers of 100 percent Vitrified Hotel and Restaurant Chinaware west of the Mississippi River. Because of the pioneering in the production of desirable Hotel China and such success and vigor, we can now bring you chinaware which is foremost in its field at low, economical prices.

HOUSTON, TEXAS
Telephone: CAPitol 7-6808

When luxury and economy go steady, you will find a complete line of "TEPCO CHINA" for all types of food service. We trust the body styles shown below will enable you to select the proper shape for your operation, keeping in mind, that you will receive more quality — more service — and more value.

ROLLED EDGE — STANDARD RIM

The oldest and more practical shape in a chinaware body. This style is used more often than any other shape.

NARROW RIM

A light weight chinaware, with a small edge on rim, which allows many variations for decorating. Will do justice to even the most simple design.

COUPE SHAPE

Is without a rim, however, it curves in on the edges toward the center, which definitely is a space-saver for table settings, and offers more top plate area.

SCALLOPED EDGE — STANDARD RIM

For that luxurious look, which will flatter and add distinction to any table setting, at a surprisingly inexpensive cost.

SCALLOPED EDGE — NARROW RIM

Modernize the Narrow Rim Body Style with an edge that is scalloped.
NOTE: Also, available is Scalloped Edge — Coupe Shape.

There is no difference in price for the Standard Rim, Narrow Rim, or Coupe Shape body styles. On the Scalloped Edge Body Styles depending on pattern, you use the list price, less discount, then plus ten per cent. However, if the pattern is listed on price list, as scalloped edge, there is no additional ten per cent charge.

Any pattern or individual decoration may be obtained in the above body colors, or styles on the preceding page.

THE SIGN OF INDIVIDUALITY

Everyone enjoys seeing their name displayed. Why not on chinaware? It will call particular attention to your name, and is a wonderful way to advertise. TEPCO CHINA's art department can design a special crest for you, or reproduce a crest or monogram already in your possession. This department is always at your disposal, and will be glad to help you in any way to make your place individual.

Your crest or monogram can be used with any one of a number of Line Treatments or in combination with a Print Pattern. Our process of Spraytones and patterns offer an unlimited opportunity to display your crest or monogram in the most attractive looking design.

For crest or monogram work, there is a roller charge, depending on size of design, and combination of colors. The roller remains the property of Technical Porcelain and China Ware Company and is a one time charge. To obtain prices of individual work, send sketch or idea and we will quote accordingly, along with samples.

TERMS OF SALES

The Bill of Lading sent to you is a guarantee that the chinaware was in good condition when shipped. Our responsibility ceases when transportation company signs Bill of Lading. All claims for loss, damage or delays in transit must be made to the transportation company.

Every shipment of cartons or barrels include a packing slip, and no claim for shortage will be allowed unless this slip is returned to us.

Due to the human element involved in china manufacturing, all special orders that are accepted can be invoiced subject to an overage or a shortage of 10% of the quantity ordered.

After an order has been accepted by the factory or branches, and is in process of manufacture, cancellation will not be accepted without our written consent.

All returned merchandise is subject to a 10% handling charge and must be accompanied by the invoice. Merchandise returned without our permission will not be accepted.

Technical Porcelain and China Ware Company will not be responsible for delays due to strikes, accidents, delay of carriers, or any other causes beyond our control.
